

C WOOD & SON
LUTON LTD

Case Study

Garage Conversion
Luton

The Job

C Wood and Son were employed to undertake a garage conversion project in Luton, Bedfordshire.

The client wanted to convert a double garage into an office and a single garage after learning they will be working remotely from home for the foreseeable future after the Covid-19 outbreak.

This project consisted of:

- building a block work wall between both garages and a 9" cavity wall to the front with footing and UPVC window.
- Insulating internally and screeding the floor.
- Installing a fire door and frame between the garage and office as per building regulations.
- Installing downlights, sockets and data.
- Heating consisting of radiator being installed.
- Decoration to be completed and finished to clients taste.

This project was completed within 4 weeks.

The client was thrilled with the work and have now asked us to carry out some driveway works which we will begin towards the end of this month.
